

EVERY SEASON IS PARASITE SEASON.

With increasing temperatures across Canada, it's important to make sure your dog is protected throughout the year.

DO YOU KNOW?

Ticks can be active whenever the temperature is above freezing (0°C).

Some **intestinal worm** eggs can survive in the environment at ANY temperature.

Lyme disease can be spread when ticks become active.

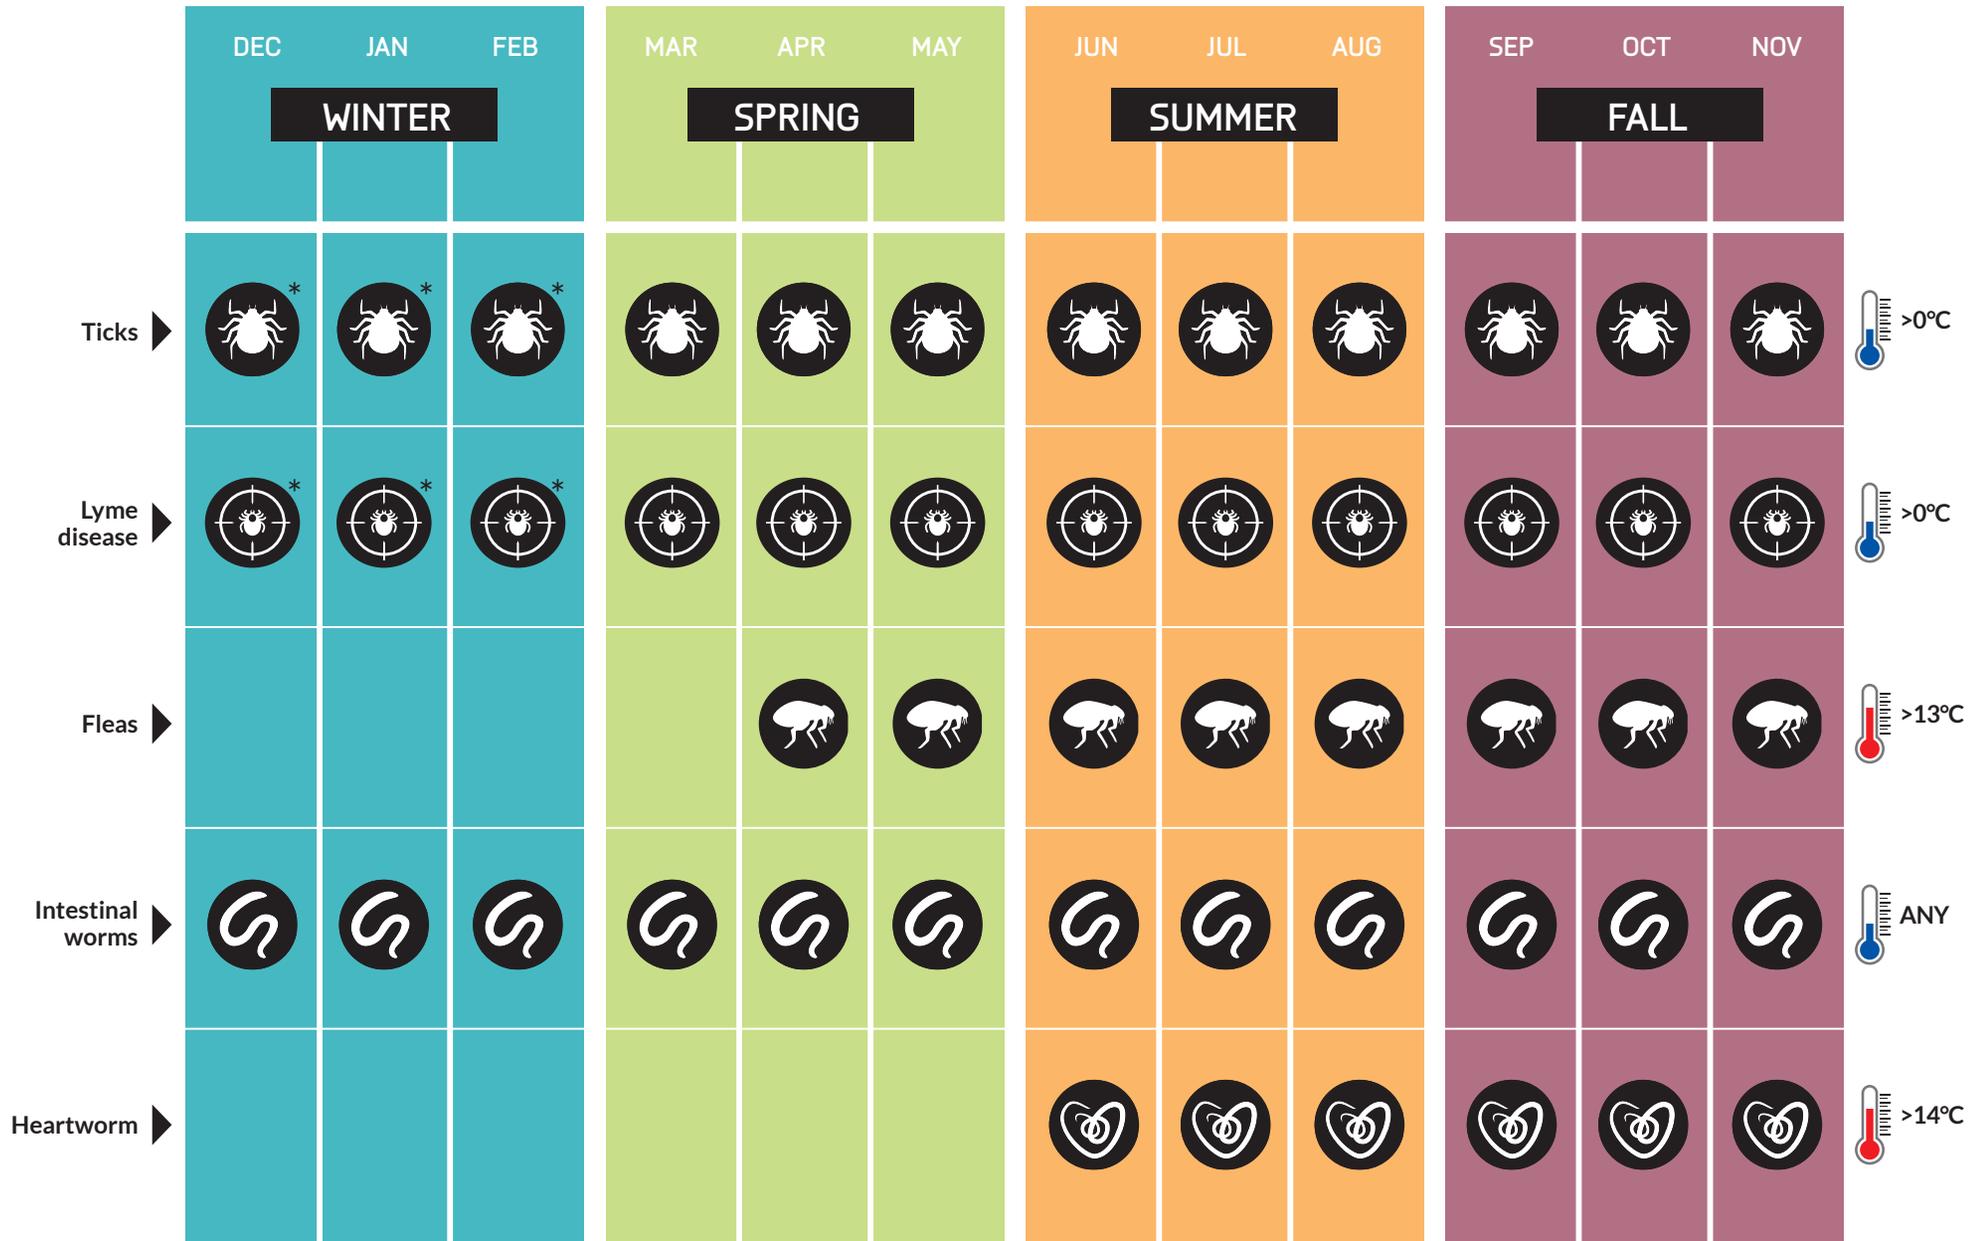

Heartworm can be spread by mosquitoes whenever the temperature is above +14°C.

Fleas are active above +13°C, but can live year-round indoors.

EXTERNAL PARASITES & DISEASES

INTERNAL PARASITES

*Ticks can be active at least one day a month in winter based on local temperatures.
